

SUPER EVAPORATIVE COOLING TEXTILES

Longlasting super-evaporative water based cooling, for use in and outdoors

- 1 SOAK IN WATER
- 2 GENTLY SQUEEZE OUT EXCESS WATER
- 3 ENJOY IMMEDIATE COOLING

The **INUTEQ-PVA** evaporative cooling technology is a highly absorbent Polyvinyl Alcohol Fabric.

Products created from this fiber are activated by soaking them in water for one minute. After squeezing out excess water they are ready for use.

The **INUTEQ-PVA** products will cool you down for several hours. They are machine washable and have antibacterial properties.

Using the **INUTEQ-PVA** evaporative cooling towel is a fast and easy way to beat the heat and stay fresh and cool at work, during sports and at leisure.

Colors. Blue

Sizes. 66cm x 43cm | 26" x 17"

Components:

Exterior. 100% Polyvinyl Alcohol Fabric.

Activation is easy. Before the first use soak the towel in warm water for one minute and let it dry completely. Then soak the towel again in clean water for one minute and gently squeeze out any excess water. Your towel is now ready for use, and will keep you comfortably cool for several hours. For storage, keep your towel in the special storage tube.

It can be stored damp or hung to dry. The towel becomes stiff when it is dried completely.

Cooling Towel SIRMIQ #121806
